

### **Solis Energy Joins Tropos Solution Partner Network to Provide Alternative Power Solutions for Wireless Network Deployments**

*Customers can now take advantage of a reliable power for their wireless networks – whatever the location*

**Orlando, Fla. – July 23, 2009** - Solis Energy, a global provider of alternative outdoor power sources, has joined Tropos' Troposphere Solution Partner Network program. Tropos is the market leader in wireless IP broadband networks and with its Troposphere Solution Partners, helps customers in building complete solutions for Smart City and Smart Grid networks. With Solis, Tropos networks can be designed around the limitations of an existing power infrastructure.

Integrators can more easily recommend and deploy an optimal power configuration for customers' wireless network – whether it is a Solar Power Plant for remote installations, a Continuous Power Bridge to bridge daytime gaps when connecting to gang-switched lights, or a UPS when power is unreliable – based on their specific network design and equipment requirements. Solis Energy's Solar Power Plant also supports Tropos Network's "green" initiatives to build a new communications infrastructure that conserves the global environment. Applications include wireless networks for utilities, intelligent transportation systems, government, public safety and public access.

"Solis brings to the table custom-configured power solutions for our products that take into account installation location and environmental conditions." says John Griebing, Director of System Engineering at Tropos Networks. "We feel these solutions provide a flexibility and reliable alternative for powering Tropos' routers in the field."

"Tropos is a well-known and greatly respected leader in the outdoor wireless network industry." said Solis Energy's Founder and CEO Robert Reynolds. "We are pleased to be partnering with them to supply the critical power components necessary to provide a complete wireless solution to customers."

#### About Tropos Networks

Tropos Networks is the worldwide market leader in wireless IP broadband mesh networks that enable customers to own and control a smart, affordable, IP foundation for deploying applications and services that build greener, safer, smarter communities. Tropos has more than 750 customers in over 30 countries around the world using the patented Tropos System Architecture to build Smart Cities and Smart Grids that are reliable, scalable and secure. Founded in 2000, Tropos is headquartered in Sunnyvale, California. [www.tropos.com](http://www.tropos.com)

#### About Solis Energy

Solis Energy is a global provider of reliable, continuous outdoor power generation and connectivity solutions for low-wattage applications, including remote solar generation, power bridges for intermittent power and emergency back-up protection. Solis Energy products are built to withstand extreme conditions and designed to be "installer friendly" for error-free, in-field set-up. The company, based in Altamonte Springs, Florida, was founded in 2005. For more information, visit [www.SolisEnergy.com](http://www.SolisEnergy.com)
